After the United Kingdom has suffered the perfect storm of a cyber-attack, with its online presence being wiped out and crucial infrastructure being severely compromised, the Ministry was formed as part of the Government reaction to D-Day, otherwise known as Dark Day or DD, to deal with all forms of serious crime, including the prohibited use and supply of hardware and software. Bandini is a Suit, the name given to employees of the Ministry, placed in charge of an investigation into the supply of contraband technology after he is caught up in the death of a colleague when a raid on hardware traffickers goes wrong. But the aftermath of the raid also attracts the attention of Ministry internal investigations. With his own integrity called into question, Bandini has to uphold the law while taking on those that wish for him to fail, with potentially life threatening consequences. A dark journey through the paranoid world of an investigator struggling within a country wiped off the Cyber map, where access to technology is for the privileged and not a way of life.
