After the unthinkable horrors of the Holocaust, the United Nations signed the Genocide Convention in 1948. Although this convention aimed for the prevention of genocide in the future, large-scale mass murder nonetheless returned in Rwanda and Cambodia, among other nations. Genocide is incredibly difficult to fight, as its causes are complex and deeply rooted, but international courts and tribunals have begun to play an increasing role in bringing perpetrators to justice. This book offers concise information about five twentieth-century cases of genocide, while analyzing overarching issues in international justice.
